NA-FDI
FAN DUCT KIT

The NA-FDI Fan Duct Kit enables it possible to significantly improve the performance of Noctua NH-U12S and NH-U14S series CPU coolers in Small Form Factor (SFF) environments where there is a gap of 30mm or more (up to 45mm) between the cooler and a perforated top or side panel. Bridging this gap, the duct prevents the cooler from allowing in hot air from the interior and enables it to draw in fresh air from the outside through the perforated panel, which can, depending on the case, improve CPU temperatures by as much as 5°C or more. As the duct is available from 200 to 300mm in terms of different thicknesses, it is fully modular and can be adjusted to fit environments from 30mm to 45mm height in order to fit various different cases and configurations. In short, the NA-FDI is a simple yet smart, flexible and cost-effective way of boosting the efficiency of NH-U12S series coolers!
